PROFILE

I am a final year Computer Science undergraduate student, eager to apply my technical foundation skills in the professional environment. As an aspiring data professional, I enjoy turning messy data into clean, actionable insights, with a dedicated focus on leveraging scalable technology to drive innovation and business growth.

I combine my data analysis skills with product development skills, with the aim of building solutions that are both data-driven and user-centered while remaining adaptable to emerging technologies and evolving industry trends.

I am specifically seeking to advance my expertise through your National Service Programme and I am fully committed to mastering core services at your noble company to support digital transformation in Ghana and on a global scale.

EDUCATION

BSc. Computer Science **Expected September 2026**

Kwame Nkrumah University of Science and Technology (KNUST), Kumasi, Ghana

W.A.S.S.C.E (General Science)

November 2019 – September 2022

St. Rose's Senior High School, Akwatia, Ghana

WORK EXPERIENCE

Intern, AmaliTech,

May 2026 – May 2026

- As a data engineer intern, I built an ETL pipeline to extract, transform and load mobile money datasets across Africa then loaded the cleaned datasets into SQLite to support analysis
- Conducted exploratory data analysis and created charts to uncover trends in MoMo adoption by regions, gender gap and transaction volumes.

Intern, Centre for Analytics Services,

September 2025 – November 2025

- Assisted in developing machine learning models to predict vehicle carbon dioxide emissions using three core vehicle features: fuel type, engine size and number of cylinders
- Supported in researching and writing an article about the vehicle carbon dioxide emissions

Intern, Creation Unite

September 2024 – November 2024

- Assisted as a frontend and backend developer of Tranquility (a mental app), with AI features which assists users with any mental information needed.

PROJECTS/RESEARCH EXPERIENCE

AidePoint

- Co-developed an offline-first mobile app with a teammate to help lab technicians classify anemia types from blood smear images using EfficientNet-B3 model in PyTorch and also generate lab reports on the type of anemia detected.

DataMine

- Developed a data automation tool with explainable AI which helps users to understand the sequence of preparing their data for model training. This website is tailored to the user's preferences during the data preparation and helps them more knowledge as they journey through the data preparation process.

DriveGreen

- Worked as the project lead in developing the DriveGreen website which predicts vehicle carbon emissions using the xgboost model.

Accex, an accessibility browser extension

- Collaborated with a team to build Accex an AI powdered accessibility browser extension which targeted the visually impaired persons aimed at addressing the user interface and user experience of most websites.

MedEase, a medical app

- Worked as a UI/UX developer in creating and designing the various screens of MedEase with a team.

PROFESSIONAL TRAINING/ CERTIFICATION

Scientific Programming with python	December,2023 March,2024	Topcoder Academy Topcoder Academy
Data Analysis with python		
Introduction to Cloud Computing	July,2025	IBM
Artificial Intelligence Fundamentals	January,2026	IBM

LEADERSHIP EXPERIENCE

PRO, Editorial Committee (August 2024 - August 2025)

Department of Computer Science - KNUST

- Communicated the ideas of the editorial board to the computer science society.
- Coordinated various photoshoots of the computer science society

SKILLS AND ABILITIES

- Data Analysis & Visualization: Microsoft Excel, d3.js
- Programming & Scripting: Python (pandas, NumPy, scikit-learn, PyTorch), SQL.
- Machine Learning: Data Preprocessing, Training Models.
- Soft Skills: Critical Thinking, Remote Collaboration, Attentiveness, Adaptability

REFEREES

Rev. Dr. Kwame Ofosuhen Peasah
KNUST
Lecturer, Department of Computer Science
